hide the captured items <sup>1,4</sup> show captured items <sup>1,4</sup>	Show/hides the captured items.
select this colour <sup>2, 3</sup>	Selects the selected colour.

## Claro Software Notes:

Dragon generic, menu, keyboard and mouse commands are available for use when using Claro software and at times should be used with these custom commands.

For example, the custom command *"capture screen section"* can be used with the *"mouse grid"* command to draw a frame around the intended section.

When performing dictation, the "Dictation Box" may appear and the use of commands such as *"click transfer"* and *"click cancel"* work in the normal way.

## Footnote:

<sup>1</sup> ClaroCapture must be the active window.

<sup>2</sup> ClaroView must be the active window.

<sup>3</sup> Claro ScreenRuler must be the active window.

<sup>4</sup> Available in ClaroCapture v5.

# VoxAid commands cheat sheet for Dolphin SuperNova Magnifier & Screen Reader Edition v18

## Notes:

It is useful to be aware of the default built-in Dragon menu, keyboard and mouse commands.

It is best practice to pause before and after dictating command phrases.

Where necessary, VoxAid commands can be trained to recognise your voice | Help is available from the support page on the VoxAid.co.uk website.

VoxAid command phrases include natural language variations to perform tasks.

select a different voice change voice	Opens the Voice Preferences window.
stop speech <sup>1</sup>	Stops speech.
stop read from here <sup>1</sup>	Stops the speech.
open doc reader window <sup>2</sup>	Opens the Doc Reader window.
close doc reader window	Closes the Doc Reader window.
time and date <sup>1</sup>	Speaks out loud the current time and date.

## Voice/Speech functions (cont'd)

Command(s) you can say	Description
battery status <sup>1</sup>	Speaks out loud the current laptop/PC battery status.
open voice preferences window	Opens the Voice Preferences window.
show voice and language settings	Opens the Voice Preferences window.
show user defined voices settings	Opens the Voice Preferences window.
show synthesiser configuration settings	Opens the Voice Preferences window.
<sup>1</sup> The command is available only on Desktop (101 or more keyboards)	
<sup>2</sup> The command is available for Laptop keyboards only	
<sup>6</sup> The command requires the Speech mode to be turned On	

## Braille functions

Command(s) you can say	Description
braille output on	Turns Braille Output on.
braille output off	Turns Braille Output off.
show braille preferences	Opens the General Preferences window
braille general announcements	Opens the General Announcements window
braille input routing buttons options	Opens the Input from Display window.
braille input dolphin cursor options	Opens the Input from Display using Dolphin Cursor window.
braille character options	Opens the Characters window.
braille layout options	Opens the Layout options window.
braille status cells options	Opens the Status Cells window.
braille cursor style options	Opens the Cursor Style options window.
show braille on screen on	Turns on the Show Braille On Screen option.
show braille on screen off	Turns off the Show Braille On Screen option.
set braille verbosity level to minimum	Sets the Braille Verbosity level to the option Minimum.
set braille verbosity level to low	Sets the Braille Verbosity level to the option Low.
set braille verbosity level to medium	Sets the Braille Verbosity level to the option Medium.
set braille verbosity level to high	Sets the Braille Verbosity level to the option High.
braille hooked areas on	Turns on the Braille Hooked Areas option.
braille hooked areas off	Turns off the Braille Hooked Areas option.
show braille advanced options	Opens the Braille Advanced Options window.

## General functions

Command(s) you can say	Description
turn off supernova hotkeys <sup>1</sup>	Turns off/deactivates the SuperNova Hotkeys
turn on supernova hotkeys <sup>1</sup>	Turns on/enables the SuperNova Hotkeys.
supernova start up preferences	Opens the Startup Preferences window.
supernova update settings	Opens the Automatic Update settings window.
supernova control panel settings	Opens the Control Panel Settings window.
supernova web settings	Opens the Web Page Settings window.
supernova touch screen settings	Opens the Touchscreen window.
supernova feedback settings	Opens the Feedback Settings window.
supernova advanced options	Opens the General Advanced Options.
scan from file	Opens the Open file to scan from... window.
scan from scanner	
open supernova scanner settings	Opens the Scan And Read Settings... window.
setup supernova scanner	Opens the Scan And Read Settings... window.
select the supernova scan language	Opens the Scan And Read Settings... window.
where are my scanned supernova documents	Opens the Scan And Read Settings... window and shows the directory path to the Scan and Read Output Folder
show my books	Opens the Bookshelf-online window (My Books).
show my newspapers	Opens the Bookshelf-online window (Newspapers).
open file in reader	Opens the Open Dolphin Doc Reader file... window.
show online books	Opens the Bookshelf-online window (Select Content Provider).
show supernova news	Opens the News window.
supernova radio stations	Opens the Radio Stations window.
supernova podcasts	Opens the Podcasts window.
<sup>1</sup> The command is available only on Desktop (101 or more keyboards)	

## Supernova Notes:

Dragon generic, menu, keyboard and mouse commands are available for use in Dolphin Supernova and at times should be used with these custom commands.

When performing dictation, the "Dictation Box" may at times appear and the use of commands such as "click transfer" and "click cancel" work in the normal way. The Dictation box can be turned off for the current application.

### Footnote:

<sup>1</sup> The command is available only on Desktop (101 or more keyboards)

<sup>2</sup> The command is available for Laptop keyboards only

<sup>3</sup> The command requires the magnifier view to be switched on

<sup>4</sup> The command requires the colour scheme option to be switched on

<sup>5</sup> The command requires the highlighting option to be switched on, to see the effect

<sup>6</sup> The command requires the Speech mode to be turned On

## VoxAid commands cheat sheet for Evernote version 6

### Notes:

It is useful to be aware of the default built-in Dragon commands to click a button or other items, show MouseGrid and the pressing of keyboard keys.

It is best practice to pause before and after dictating command phrases.

Where necessary, VoxAid commands can be trained to recognise your voice | Help is available from the support page on the VoxAid.co.uk website.

VoxAid command phrases include natural language variations to perform tasks.

Global commands (Global commands can be used at any time; Evernote does not need to be the active window)

Command(s) you can say	Description
create a new evernote note create a new note in evernote open new evernote	Creates/Opens a new Evernote note window.
find in evernote	Starts a new Evernote search.
find in evernote the phrase (x) find in evernote the word (x)	Starts a new Evernote search with the dictated word or phrase placed in the search field.
copy selection clip selection	Copies the selected text or item to the Clipboard.
paste clipboard into evernote as a new note paste into evernote as a new note	Pastes the contents of the Clipboard into a new Evernote note.
perform a screen capture take a screen capture	Performs a full screen capture which is saved to the Clipboard, the screen will blink briefly.

### Search commands

Command(s) you can say	Description
quick search	Opens the Evernote search window with the cursor placed in the search field; ready for you to dictate what you are searching for.
search all notes	Reveals the Evernote search window with the cursor placed in the search field; ready for you to dictate the word or phrase to search for in all the notes.
search all notes for the word (x) search all notes for the phrase (x)	Starts a new Evernote search of all the notes for the dictated word or phrase. For example, say "search all notes for the word politician".
find within note search within note	Reveals the Evernote search window with the cursor placed in the search field; ready for you to dictate the word or phrase you are searching for in the selected note text.

## Search commands (cont'd)

Command(s) you can say	Description
find the word (x) find the phrase (x) search note for the word (x) search note for the phrase (x)	Starts a new Evernote search for the dictated word or phrase within the selected note text. For example, say "find the phrase houses of parliament".
find next	Finds and selects the next instance of the searched for word or phrase.
find previous	Finds and selects the previous instance of the searched for word or phrase.
search for notebook search notebooks	Opens the search Notebook window with the cursor placed in the search field; ready for you to dictate the name of the Notebook you are searching for.
search for the notebook (x) locate the notebook (x)	Opens the search Notebook window with the dictated notebook title in the search field. For example, say "search for the notebook research".
show search explanation	Shows the search explanation.
show all the tags used search tags	Shows all the Tags that have been used
search for the tag (x) search for the tag named (x)	Opens the search Tag window with the dictated Tag title in the search field. For example, say "search for the tag approved".
view tags used view the tags used in this notebook view the tags used in this note	Shows the Tags used in the selected Notebook or Note
create a saved search	Opens the Saved Search Properties window.
show saved searches show my saved searches	Shows created saved searches.

## Application commands

Command(s) you can say	Description
create a new note new note	Opens a new note window.
create a new notebook new notebook	Opens the New Notebook window, ready for you to dictate a name for the new Notebook.
create a new local notebook new local notebook	Opens the New Local Notebook window, ready for you to dictate a name for the new Local Notebook.
create a new evernote tag create a new tag	Opens the Create Tag window, ready for you to dictate a name for the new Tag.
new ink note create a new ink note	Opens a new Ink Note window.
new audio note create a new audio note	Opens a new Audio Note window.
new webcam note create a new webcam note	Opens the New Webcam Note window.

## Application commands (cont'd)

Command(s) you can say	Description
new screenshot note create a new screenshot note	Reveals the crosshair lines, ready for you to capture a window or portion of the screen.
assign a tag open the assigns tag window	Opens the Assign Tags window. It shows a list of the available Tags that can be assigned to the selected note(s).
new chat start new chat	Opens the Work Chat window.
switch to another user	Switches to a second user in the Evernote application.
perform sync sync evernote synchronise evernote	Synchronises the Evernote application with Evernote on the Web.
perform spell checker spell check	Performs a spell check.
print this note print these notes	Opens the Print window.
print preview show print preview	Shows the note as a PDF in Adobe Reader.
display note info show note info	Reveals a pop-up window containing information about the selected note.
open online help show evernote help	Opens the browser at Evernote online help.
import evernote file import an evernote file	Reveals the Open window, ready for you to import an Evernote file.
import microsoft onenote file import a microsoft onenote file	Reveals the Open window, ready for you to import a OneNote file. You will need to have the desktop version of OneNote 2007 or higher installed on your PC.
export evernote file back up evernote perform export	Opens the Export x note(s) window.
exit evernote quit evernote	Closes the Evernote application.
show account info show account information	Reveals the Account Info window.
show evernote options window show evernote options	Reveals the Evernote Options window.
customise evernote toolbar customise toolbar	Reveals the Evernote Toolbar pop up window.

## View commands

Command(s) you can say	Description
display shortcuts in left panel show the shortcuts	Shows the created Evernote shortcuts in the left panel.
display shortcuts in a separate tool bar show shortcuts as a separate tool bar	Shows the created Evernote shortcuts in a separate toolbar.
display shortcuts in tool bar	Shows the created shortcuts in the Evernote toolbar.
hide evernote shortcuts hide the shortcuts	Hides the created shortcuts.
toggle view switch to another view switch to a different view	Switches the current Evernote view to another type of view.
switch to snippet view	Switches the current Evernote view to the Snippet view.
switch to card view	Switches the current Evernote view to the Card view.
switch to top list view	Switches the current Evernote view to the Top List view.
switch to side list view	Switches the current Evernote view to the Side List view.
switch to thumbnail view	Switches the current Evernote view to the Thumbnail view.
toggle left panel show left panel hide left panel	Toggle show/hide the Left Panel.
toggle note list show note list hide note list	Toggle show/hide the Note List.
toggle note panel show note panel hide note panel	Toggle show/hide the Note Panel.
toggle tag view show tag view hide tag view	Toggle show/hide the Tag view.
zoom in	Zooms into Evernote
zoom out	Zooms out from Evernote.
reset zoom	Resets the zoom back to the default zoom level.
toggle status bar show status bar hide status bar	Toggle show/hide the Status Bar.
toggle editing toolbar show editing toolbar hide editing toolbar	Toggle show/hide the Editing Toolbar.
toggle shared with me show shared with me hide shared with me	Toggle show/hide the Shared with Me window.

## Note Editor commands

Command(s) you can say	Description
increase font size	Increases the font size of the selected text within the selected note.
decrease font size	Decreases the font size of the selected text within the selected note.
show font window	Opens the Font window.
make selection superscript change to superscript	Changes the selected text to superscript.
make selection subscript change to subscript	Changes the selected text to subscript.
format selection as a bulleted list	Formats the selected text as a bulleted list.
format selection as a numbered list format selection as an ordered list	Formats the selected text as a numbered list.
make selection strikethrough strikethrough the selected text	Strikethrough the selected text.
left justify left justify this text	Left justifies the selected text.
right justify right justify this text	Right justifies the selected text.
justify text justify this text	Justifies the selected text.
center the text center this text	Centers the selected text.
increase indentation	Increases the indentation of the selected text.
decrease indentation	Decreases the indentation of the selected text.
highlight selected text	Highlights the selected text.
insert horizontal line insert horizontal rule	Inserts a horizontal line.
insert a checkbox	Inserts a Check Box.
check all checkboxes	Checks all Check Boxes in the selected note.
uncheck all checkboxes	Unchecks all Check Boxes in the selected note.
add hyperlink	Opens the Add Link window, ready for you to insert a hyperlink.
edit hyperlink	Opens the Edit Link window, ready for you to edit the hyperlink.
remove hyperlink	Removes the hyperlink from the selected hyperlinked text.
remove formatting	Removes formatting of the selected text.
simplify formatting	Simplifies the format of the selected text.
insert a table	Opens the Insert Table window.
present this note	Switches the selected note to the Presentation Mode.

## Note Editor commands (cont'd)

Command(s) you can say	Description
present on another screen present this note on another screen	Switches the selected note to the Presentation Mode. When a user has two screens, it opens the Presentation Mode on the second monitor.
encrypt selected text	Opens the Note Encryption window.
tag this note open assign tags dialog	Opens the Assigns Tags window. You can now select a Tag or create a new one to be assigned to the selected note.
insert date and time insert todays date and time	Inserts the current Date and Time.

## Note List commands (Note List commands work when focus is on a note in the Note List Section)

Command(s) you can say	Description
go to previous note	Moves the focus to the previous note.
go to next note	Moves the focus to the next note.
scroll up one page scroll up	Moves the focus to the note one page up in the list of notes in the Notes List Section.
scroll down one page scroll down	Moves the focus to the note one page down in the list of notes in the Notes List Section.
go to first note in list go to the first note in list	Moves the focus to the first note in the list of notes in the Notes List Section.
go to last note in list go to the last note in list	Moves the focus to the last note in the list of notes in the Notes List Section.
delete this note move note to trash	Moves the selected note to the Evernote Trash.
select all notes	Selects all the notes within the Notes List Section.
open in a new window open this note in a separate window	Opens the selected note in a separate window.
copy internal link to the clipboard copy internal link	Copies the internal link the selected note to the clipboard.
copy sharable link to the clipboard copy sharable link	Copies the sharable link the selected note to the clipboard.
copy note copy this note	Reveals the Copy Note to Notebook window.
move note move this note	Reveals the Move Note window.
duplicate note duplicate this note	Creates a duplicate copy of the selected note. The duplicate note will have the suffix "copy" added to the title name.
email this note email the selected notes	Opens the Email Note window.
share this note share selected notes	Opens the Share within Evernote window.

## Note List commands (cont'd)

Command(s) you can say	Description
post to facebook share this note on facebook	Opens the browser to Facebook.com
post to twitter tweet this note	Opens the browser to Twitter.com. Ready for you to tweet the note title and sharable link of the selected note.
post to linkedin share this note on linkedin	Opens the browser to LinkedIn.com
set focus in the note editor edit this note	Places the cursor into the Note Editor section of the selected note.
show note history show this notes history	Reveals the history of the selected note.
show word and resources counts show word and resources stats	Opens the Word and Resource Counts window. Displays word count, paragraph numbers etc.

## Evernote Notes:

Dragon generic, menu, keyboard and mouse commands are available for use in Evernote and at times should be used with these custom commands.

For example, when the Evernote left pane is in focus, commands such as *"press down arrow"* and *"press right arrow"* can be used to navigate between the Stacks and reveal/hide any Notebooks within Stacks. To select a Notebook, use the generic command *"press enter"*.

When performing dictation, the "Dictation Box" may at times appear and the use of commands such as *"click transfer"* and *"click cancel"* work in the normal way. The Dictation box can be turned off for the current application.

# VoxAid commands cheat sheet for Inspiration v9 & v10

## Notes:

It is useful to be aware of the default built-in Dragon menu, keyboard and mouse commands.

It is best practice to pause before and after dictating command phrases.

Where necessary, VoxAid commands can be trained to recognise your voice | Help is available from the support page on the VoxAid.co.uk website.

VoxAid command phrases include natural language variations to perform tasks.

## Frequently used

Command(s) you can say	Description
open starter screen show inspiration starter window	Opens the Starter screen.
open new diagram document	Selects Diagram option in the Starter window.
open new outline document	Selects Outline option in the Starter window.
open new map document	Selects Map option in the Starter window.
open inspiration templates	Selects Templates option in the Starter window.
open new document new document	Opens a new document.
open existing document open an existing document	Opens an existing document.
close active window close the active window close active window	Closes the active window.
minimize window minimize inspiration	Minimize window.
save current document save document	Save current document.
print document print this document print this	Opens the Print window.
print preview show print preview open print preview	Opens the Print Preview window.
close print preview	Closes the Print Preview window.
exit inspiration quit inspiration close inspiration	Quit/Exit Inspiration.
paste date paste todays date	Inserts todays date.
apply that finish editing	Confirms the dictated phrase or word.

## Frequently used (cont'd)

Command(s) you can say	Description
open find window	Opens the Find window.
find the topic (x) find the phrase (x)	Looks for and if found, applies focus to the Topic of the dictated topic title. For example, say "find the topic conclusion".
spell check document perform spell check	Opens the Spell Check window and performs a spell check on the document.
insert hyperlink add hyperlink	Insert hyperlink.
add a note to this symbol add a note to this topic add note	Add a note to the selected symbol or topic.
toggle note show note hide note	Toggle show/hide the selected note.
show all notes	Shows all notes.
hide all notes	Hides all notes.
open word guide	Opens the Word Guide window.
toggle checklist show checklist hide checklist	Toggles show/hide checklists.
insert graphic insert an image	Opens the Open window.
open the export window	Opens the export window
export to pdf	Opens the Save: Inspiration window.
export to powerpoint	Opens the Save: Inspiration window.
transfer to word processor	Opens the Transfer Options window.
make map document	Creates a Map document.
gather hyperlinked files	Gather hyperlinked files
export to ipad inspiration maps	Opens the Export as Inspiration Maps document window.
import ipad inspiration maps	Opens the Import an iPad Inspiration Maps document window.
transfer to clipboard	Copies the content to the Clipboard.
Transfer to google docs	Opens a new Google Docs document in the default browser. Dictate "Paste That" to paste the content.

## Frequently used in Diagram view functions

Command(s) you can say	Description
make a symbol to the left create a symbol to the left	Makes a symbol to the left.
make a symbol to the right create a symbol to the right	Makes a symbol to the right.
make a symbol above create a symbol above	Makes a symbol above.
make a symbol below create a symbol below	Makes a symbol below.
turn on rapidfire start rapidfire	Turns on RapidFire.
turn off rapidfire stop rapidfire	Turns off RapidFire
set rapidfire to with links	Sets RapidFire to with links mode.
set rapid fire to without links	Sets RapidFire to without links mode.
toggle link tool turn link tool on turn link tool off	Toggle on/off Link tool.
fit document to window	Fits the document to window, available in Diagram view only.
show specified number of levels open show levels window	Opens the Show Levels window.
focus on this symbol apply focus focus in	Focus in on selected area of document while hiding other elements.
show entire document focus out	Focus out to show entire document.
show subtopics hide subtopics toggle subtopics	Toggles show/hide the Subtopics of the selected symbol.
resize note resize the selected note	Resize the selected note.
paste symbol size	
end text editing	End text editing and select the note.
deselect note	Deselect note and select the note's symbol or topic.
arrange symbols as tree	Arranges the symbols as a tree diagram.
arrange symbols as web	Arranges the symbols as a web diagram.
arrange symbols as split tree	Arranges the symbols as a split tree diagram.
toggle auto arrange auto arrange on auto arrange off	The diagram is arranged automatically.
bring to front bring symbol to the front	Brings to front the selected symbol (only if AutoArrange symbols setting is off).
send to back send symbol to the back	Sends to back the selected symbol (only if AutoArrange symbols setting is off).
apply shadow remove shadow	Apply/remove a shadow to the selected symbols.

## Frequently used in Diagram view functions (cont'd)

Command(s) you can say	Description
change to captioned remove caption	Toggles the converting of a symbol into a captioned symbol.
change to white background remove white text background	Apply/remove the white text background effect to the selected symbols.
frame this symbol remove frame	Apply/remove a frame to the selected symbols.
apply dashed line remove dashed line	Apply/remove a dashed line to the selected symbols.
evenly space vertically	Evenly space the selected symbols vertically.
evenly space horizontally	Evenly space the selected symbols horizontally.
align symbol tops	Aligns the top edges of the selected symbols.
align horizontal centres	Aligns the horizontal centres of the selected symbols.
align symbol bottoms	Aligns the bottom edges of the selected symbols.
align the left sides	Aligns the left sides of the selected symbols.
align the vertical centres	Aligns the vertical centres of the selected symbols.
align the right sides	Aligns the right sides of the selected symbols.
take snapshot	Opens the Snapshot for Presentation window.

## Frequently used in Outline view functions

Command(s) you can say	Description
add topic	Inserts a topic.
insert subtopic	Inserts a subtopic.
smart topic insert	Smart topic insert.
insert higher level topic	Inserts a higher-level topic.
insert new main idea	Inserts a new main idea.
move left move topic left	Moves the selected topic left.
move right move topic right	Moves the selected topic right.
select this level of topics select this level	Selects all topics of the same level as the selected topic.
select subtopics	Selects the topic and subtopics of the selected topic.
flip up move topic up	Moves the topic position up.
flip down move topic down	Moves the topic position down.
promote subtopics	Promotes the subtopics.
demote topics	Demotes the subtopics.
split topic	Splits the topic.
combine topics	Combines the selected topics.
break apart break apart topic	Breaks apart the selected topic.
show sort window show sort settings	Shows the Sort window.
sort the order of topics sort these topics	Sorts the topics based on sort settings.
set notes text split text and add to note	Set Notes Text, pushes topic text from the cursor position into the topic note.
toggle page break set page break remove page break	Toggle insert/remove a page break.
lock item lock topic	Lock topic.
unlock item unlock topic	Unlock topic.
change prefix labels to working format change prefix to roman numerals change prefix to alpha numerals change prefix to legal change prefix labels to numeric change prefix to bullets change prefix to power outlining change to no prefix	Changes the prefix label style.
open custom prefix labels create custom prefix labels	Opens the Custom Prefix Labels window.
start prefix at main idea toggle start at main idea	Starts the prefix label from the main idea.

## Frequently used in Map view functions

Command(s) you can say	Description
add branch topic	Adds a branch topic.
add branch subtopic	Adds a branch subtopic to the selected branch.
turn on rapidfire start rapidfire	Turns on RapidFire.
set rapidfire to attached	Sets RapidFire to attached mode.
set rapid fire to detached	Sets RapidFire to detached mode.
delete selected branch delete branch	Deletes the selected branch.
detach selected branch detach branch	Detaches the selected branch.
move symbol above branch	Moves the symbol to above the branch.
move symbol below branch	Moves the symbol to below the branch.
toggle create relationship tool create relationship cancel create relationship	Toggle create relationship tool.
increase branch thickness	Increases the thickness of the branch.
decrease branch thickness	Decreases the thickness of the branch.
take snapshot	Opens the Snapshot for Presentation window.

## View documents functions

Command(s) you can say	Description
switch between views change to map view change to outline view	Toggles between the Outline and Map view.
zoom in	Zoom in to the document.
zoom out	Zoom out from the document.
set default set default look of symbols set default look of links set default look of notes	Sets the default look to the same as the selected symbol, links or notes.
apply default apply default look of symbols apply default look of links apply default look of notes	Applies the default look to symbols, links or notes.
toggle symbol palette show symbol palette hide symbol palette	Toggle Symbol palette (diagram & map view only).
toggle toolbars show toolbars hide toolbars	Toggle toolbars.
toggle main toolbar show main toolbar hide main toolbar	Toggle main toolbar.

## View documents functions (cont'd)

Command(s) you can say	Description
toggle formatting toolbar show formatting toolbar hide formatting toolbar	Toggle formatting toolbar.
toggle show grid turn grid on turn grid off	Toggle on/off Show Grid (diagram view only).
toggle page lines show page lines hide page lines	Toggle display of page lines (diagram & map view only).
toggle rulers show rulers hide rulers	Toggle display of rulers (diagram & map view only).
toggle prefixes show prefixes hide prefixes	Toggle display of prefixes next to topics (outline view only).
toggle symbols show symbols hide symbols	Toggle display of symbols next to topics (outline view only).
toggle link text show link text hide link text	Toggle show/hide link text (outline view only).

## Listen tool functions

Command(s) you can say	Description
toggle preferences listen tool make the listen tool available make the listen tool unavailable	Toggles on/off the availability of the listen tool.
toggle listen tool turn on listen tool turn off listen tool	Toggles on/off the Listen tool.
read text in current selection read text aloud	Reads out loud the text.

## Symbol palette functions

Command(s) you can say	Description
toggle symbol palette show symbol palette hide symbol palette	Toggle Symbol palette.
start symbol search search symbols	Places the cursor in the search symbols field.
display next library on symbol palette show library on symbol palette display next library	Displays the next library on symbol palette.
display previous library on symbol palette show previous library on symbol palette display previous library	Displays the previous library on symbol palette.

## Symbol palette functions (cont'd)

Command(s) you can say	Description
add oval symbol change to oval symbol	Converts a selected symbol into an oval symbol. If no symbols are selected, then a new oval symbol is created.
add rectangle symbol change to rectangle symbol	Converts a selected symbol into a rectangle symbol. If no symbols are selected, then a new rectangle symbol is created.
add rounded rectangle symbol change to rounded rectangle symbol	Converts a selected symbol into a rounded rectangle symbol. If no symbols are selected, then a new rounded rectangle symbol is created.
add text-only symbol change to text-only symbol	Converts a selected symbol into a text-only symbol. If no symbols are selected, then a new text-only symbol is created.
add cloud symbol change to cloud symbol	Converts a selected symbol into a cloud symbol. If no symbols are selected, then a new cloud symbol is created.
add custom strip symbol change to custom strip symbol	Converts a selected symbol into a custom strip symbol. If no symbols are selected, then a new custom strip symbol is created.

## Navigation (Diagram view) functions

Command(s) you can say	Description
show grid settings window show grid settings	Show the Grid Settings window.
toggle show grid show grid on show grid off	Toggle on/off Show Grid.
toggle snap to grid snap to grid on snap to grid off	Toggle on/off Snap to Grid.
scroll left one grid box scroll left	Scroll left one grid box.
scroll right one grid box scroll right	Scroll right one grid box.
scroll up by one grid box	Scroll up one grid box.
scroll down by one grid box	Scroll down one grid box.
scroll to top left	Scroll to top left.
scroll to bottom right	Scroll to bottom right.
scroll up one page	Scroll up one page.
scroll down one page	Scroll down one page.
scroll left one page	Scroll left one page.
scroll right one page	Scroll right one page.
scroll to selection	Scroll to selection.

## Navigation (Diagram view) functions (cont'd)

Command(s) you can say	Description
move crosshair one grid box left move crosshair left	Move crosshair one grid box left.
move crosshair one grid box right move crosshair right	Move crosshair one grid box right.
move crosshair one grid box up move crosshair up	Move crosshair one grid box up.
move crosshair one grid box down move crosshair down	Move crosshair one grid box down.

## Navigation (Outline view) functions

Command(s) you can say	Description
scroll to top	Scrolls to the top.
scroll to bottom	Scrolls to the bottom.
scroll to selection	Scrolls to the selected topic.

## Navigation (Map view) functions

Command(s) you can say	Description
scroll up	Scroll up the page.
scroll down	Scroll down the page.

## Selecting and moving (in Diagram view) functions

Command(s) you can say	Description
select all objects	Selects all objects.
select all objects at this level select this level	Selects all objects at the same level as the selected object.
select first main idea select main idea	Selects the first main idea.
select nearest symbol left	selects the nearest symbol left.
select nearest symbol right	selects the nearest symbol right.
select nearest symbol up	selects the nearest symbol up.
select nearest symbol down	selects the nearest symbol down.
move symbol left move symbol right move symbol up move symbol down	Nudges the selected symbol(s) left   right   up   down one pixel.
move left by ten, twenty,... ninety move right by ten, twenty,... ninety move upwards by ten, twenty,... ninety move downwards by ten, twenty,... ninety	Nudges the selected symbol(s) left   right   up   down by a larger amount. For example, say "move left by thirty".

## Selecting and moving (in Diagram view) functions (cont'd)

Command(s) you can say	Description
move selected symbols left one grid box move selected symbols left	Moves the selected symbol(s) left one grid box.
move selected symbols right one grid box move selected symbols right	Moves the selected symbol(s) right one grid box.
move selected symbols up one grid box move selected symbols up	Moves the selected symbol(s) up one grid box.
move selected symbols down one grid box move selected symbols down	Moves the selected symbol(s) down one grid box.
group selected diagram objects group selected objects	Group the selected diagram objects.
ungroup selected diagram objects ungroup these objects	Ungroup the selected diagram grouped objects.
arrange diagram open arrange window	Opens the Arrange window.

## Selecting and moving (in Outline view) functions

Command(s) you can say	Description
select all topics	Selects all topics.
select all topics at this level select this level of topics	Selects all topics at the same level as the selected object.
select first main idea select main idea	Selects the first main idea.
select this topic select this topic only	Selects the cursor position topic.
select previous topic	Selects the previous topic.
select next topic	Selects the next topic.
select next topic above at same level	Select next topic above at same level.
select next topic below at same level	Select next topic below at same level.
select superior topic	Selects the superior topic.
select superior topic and hide	Select superior topic and hide.
select inferior topic and show it	Select inferior topic and show it.
select inferior topic	Selects the inferior topic.

## Selecting and moving (in Map view) functions

Command(s) you can say	Description
select all branches	Selects all branches.
select all branches at this level	Selects all branches at the same level as the selected branch.
select central idea select main idea	Selects the first central idea.

## Selecting and moving (in Map view) functions (cont'd)

Command(s) you can say	Description
select branch to the left	Selects the branch to the left of the selected branch.
select branch to the right	Selects the branch to the right of the selected branch.
select branch above	Selects the branch above the selected branch.
select branch below	Selects the branch below the selected branch.
nudge selected branches left one pixel nudge branches left	Nudges the selected branch(s) left one pixel.
nudge selected branches right one pixel nudge branch right	Nudges the selected branch(s) right one pixel.
nudge selected branches up one pixel nudge branch up	Nudges the selected branch(s) up one pixel.
nudge selected branches down one pixel nudge branch down	Nudges the selected branch(s) down one pixel.

## Presentation functions

Command(s) you can say	Description
create new slide click new slide	
duplicate slide click duplicate	
split slide click split slide	
add container	
create new talking point click talking point	
display talking points hide talking points	
move talking point left click left	
move talking point right click right	
slide transition	
play presentation	
open auto play settings	
send tools to top send tools to bottom	
click back click back icon	
start over	
customize theme	

## Selecting text functions

Command(s) you can say	Description
extend selection to beginning of topic	
extend selection to end of topic	
extend selection to beginning of line	
extend selection to end of line	
extend selection left one character	
extend selection right one character	
extend selection left one word	
extend selection right one word	
extend selection up one line	
extend selection down one line	
extend selection up one paragraph	
extend selection down one paragraph	
end text editing	

## Editing text functions

Command(s) you can say	Description
move cursor to beginning of topic	
move cursor to end of topic	
move cursor to beginning of line	

## Editing text functions (cont'd)

Command(s) you can say	Description
move cursor to end of line	
move cursor left one character	
move cursor right one character	
move cursor left one word	
move cursor right one word	
move cursor up one line	
move cursor down one line	
move cursor up one paragraph	
move cursor down one paragraph	

## Formatting text functions.

Command(s) you can say	Description
remove text formatting	
apply plain text format format as plain text	
make text all caps change text to all caps	
left align the text left justify the text	
center align the text center the text	
right align the text right justify the text	
increase font size	
decrease font size	
superscript the text make this text superscript	
subscript the text make this text subscript	

**Note:** Common built-in Dragon commands such as "*bold that*", "*underline that*" & "*italicise that*" can be dictated.

## Settings, Tools and Utility functions

Command(s) you can say	Description
change default Background colour <sup>1</sup>	Opens the Diagram and Map Defaults window.
change outline Background colour <sup>2</sup>	Opens the Diagram and Map Defaults window.
sync outline to diagram <sup>1</sup>	Performs the sync outline to diagram function.
presentation manager open presentation settings	Opens the Presentation Settings window.
create headers and footers	Opens the Page Setup: Diagram window.
open arrange settings window	Opens arrange settings window (diagram view only).
insert a sound file	Opens the Open window.
insert a video	Opens the Open window.
record a sound	Opens the record window.
play sound	Play the sound on the selected symbol.
play video	Play the video on the selected symbol.
remove sound	Removes the sound from the selected symbol.
open choose voice window change current voice	Opens the choose voice window.
open summation window	Opens the summation window.
start template wizard	Starts the template wizard.
show default settings open default settings window	Opens the default settings window.
show preferences window	Opens the preferences window.
add symbol to library	Opens the Symbol size window.
new symbol library create new symbol library	Opens the Add New Library window.
edit symbol libraries	Opens the Edit Symbol Libraries window.
toggle picture to topic turn on picture to topic turn off picture to topic	Toggles the Picture to Topic setting.
show behaviours preferences	
show display preferences	
show audio preferences	
show keyboard preferences	
show formats and units preferences	
tile side by side tile top to bottom	Tiles all open Inspiration documents.
cascade the documents	Cascades all the open Inspiration documents.
click citation <sup>2</sup> add references <sup>2</sup>	Opens the Citation / Sources window.

### Inspiration Notes:

Dragon generic, menu, keyboard and mouse commands are available for use in Inspiration and at times should be used with these custom commands.

When performing dictation, the "Dictation Box" may appear and the use of commands such as "*click transfer*" and "*click cancel*" work in the normal way. The dictation box feature can be turned off.

### Footnote:

<sup>1</sup> *The command is only available for Inspiration version 10.*

<sup>2</sup> *The command is only available for Inspiration version 10 updated.*

# VoxAid commands cheat sheet for MindGenius 2019

## Notes:

It is useful to be aware of the default built-in Dragon menu, keyboard and mouse commands.

It is best practice to pause before and after dictating command phrases.

Where necessary, VoxAid commands can be trained to recognise your voice | Help is available from the support page on the VoxAid.co.uk website.

VoxAid command phrases include natural language variations to perform tasks.

## Frequently used

Command(s) you can say	Description
open mindgenius launch mindgenius	Opens the MindGenius application.
close mindgenius exit mindgenius	Closes the MindGenius application.
create a new document create a new mind map	Create a new document based on the default template.
add sibling branch create new branch add new branch	Creates a new sibling branch in the mind map and places the cursor in the branch ready for dictation.
add a child branch create child branch add new child branch	Adds a child branch to the selected branch and places the cursor in the branch ready for dictation.
add parent branch add a new parent branch	Creates a branch immediately before the selected branch, therefore the currently selected branch will become a child branch of the new branch. Places the cursor in the branch ready for dictation.
add (x) branches create (x) branches create (x) sibling branches	Adds (x) sibling branches to the map (1...10). For example, say "add 3 branches".
add (x) child branches create (x) child branches	Adds (x) child branches to a branch (1...10). For example, say "add 3 child branches".
go to notes editor add note switch to notes pane	Places the cursor in the notes pane for the selected branch.
go back to map pane go to map pane	Selects the map pane.
dock notes dock the notes	Docks the notes pane below the map.
restore notes to side bar move notes to side bar	Restores the notes pane to the sidebar.
add hyperlink add a link	Opens the Add Hyperlink(s) window.
add attachment add an attachment	Opens the Add Attachment(s) window.
browse for a picture add image to branch	Opens File Explorer.

## Frequently used (cont'd)

Command(s) you can say	Description
browse gallery browse mind genius gallery	Shows the Picture Gallery pane in the sidebar.
format branch picture edit branch picture	Opens the Format Picture window for the selected branch.
edit branch edit branch title	Edit the title of the selected branch.
edit child branch edit the child branch	Places the cursor into the child branch of the selected branch ready for dictation.
edit parent branch edit the parent branch	Places the cursor into the parent branch of the selected branch ready for dictation.
apply that press enter	Confirms the dictated phrase or word in a branch title.
delete this branch delete branch	Deletes the selected topic and all connected subtopics.
remove this branch remove this branch only	Deletes only the selected branch, any existing child branches will remain as part of the map.
edit branch style change branch appearance	Opens the Branch Appearance window.
save this map save document	Saves the MindGenius document.
save to google drive export to google drive	Save to the cloud.
save to one drive export to one drive	Save to the cloud.
save to dropbox export to dropbox	Save to the cloud.
save as html file export as html file	Opens the Save As File Explorer window.
save map as a pdf export map as pdf	Opens the Save As File Explorer window.
save as a jpeg image	Opens the Save As File Explorer window.
save as a png image	Opens the Save As File Explorer window.
save as a bmp image	Opens the Save As File Explorer window.
save as a emf image save as an enhanced metafile	Opens the Save As File Explorer window.
save map as an excel file save as an excel file	Opens the Save As File Explorer window.
show export as pdf options show save as pdf options	Reveals the Export as PDF options window.
show export as powerpoint options show save as powerpoint options	Reveals the Save as PowerPoint options window.
show export as excel options show save as excel options	Reveals the Excel Export Options window.
show export as word options show save as word options	Reveals the Save as Word options window.
show export as visio options show save as visio options	Reveals the Save as Visio options window (if Visio 2000 or later is installed).
show export as microsoft project options show save as project options	Reveals the Save as Microsoft Project options window (if Project 98 or later is installed).

## View functions

Command(s) you can say	Description
fit map	Resizes the map to fit the current window size.
select map core select central branch go to core branch	Returns the focus to and selects the map core.
focus branch focus on this branch only isolate branch	Displays and applies focus only to the selected topic and its subtopics.
show map view switch to map view	Displays the map view.
show the map view clockwise show map clockwise	Shows the mind map in map view (clockwise branches).
show the map view counter clockwise show map counter clockwise	Shows the mind map in map view (clockwise branches).
apply the input tree map layout show the input tree map layout	Shows the mind map in input tree map layout view.
apply the output tree map layout show the output tree map layout	Shows the mind map in output tree map layout view.
apply the outline map layout show outline view	Shows the mind map in outline view.
toggle map numbering show map numbering hide map numbering	Turns on/off map numbering on branches.
print preview show print preview	Switches to the print preview view.
close print preview	Closes the print preview view.
show core branch only collapse map	Display the map showing only level one topics.
collapse selected branch collapse this branch collapse branch	Hides all the child branches of the selected branch.
expand selected branch expand branch	Expands the selected topic to reveal its subtopics.
limit view to level one branches show one level	Displays the map showing only level one branches.
limit view to level two branches show two levels	Displays the map showing branches that are level one and two.
limit view to level three branches show three levels	Displays the map showing branches that are level one, two and three.
show all levels of branches show all levels	Displays the map showing topics of all levels.
zoom in	Zooms in to the map.
zoom out	Zooms out from the map.
return to 100 percent view set zoom to 100 percent	Sets the zoom to 100%.
toggle auto zoom turn on auto zoom turn off auto zoom	Toggles the auto zoom setting.
toggle full screen view switch to full screen view show full screen view	Shows the map in full screen view.

## View functions (cont'd)

Command(s) you can say	Description
close full screen view	Closes the full screen view.
select branch below select next branch	Moves selection down through the visible tree
select branch above select previous branch	Moves selection up through the visible tree
select first branch move to top sibling branch	Selects the first topic in the level of branches.
select last branch move to bottom sibling branch	Selects the last branch in the level of branches.
move left	Selects the branch to the left of the selected branch.
move right	Selects the branch to the right of the selected branch.
move up	Selects the branch above the selected branch.
move down	Selects the branch below the selected branch.
select all branches	Selects all branches.
cut branches cut branch	Cuts the selected branch(s).
copy branches copy branch	Copies the selected branch(s).
paste branch paste branches paste from clipboard	Pastes from the clipboard. Pastes the contents of the Clipboard into a subtopic of the selected topic.
decrease horizontal spacing	Decreases the horizontal spacing between branches.
increase horizontal spacing	Increases the horizontal spacing between branches.
increase vertical spacing	Increases the vertical spacing between branches.
decrease vertical spacing	Decreases the vertical spacing between branches.
show ribbon screen keys	Shows the ribbon screen keys.
switch to status view show status view close status view	Toggles the Status view.
switch to priority view show priority view close priority view	Toggles the Priority view.
switch to categories view show categories view close categories view	Toggles the Categories view.
switch to resources view show resources view close resources view	Toggles the Resources view.

## Other functions

Command(s) you can say	Description
show map statistics show word count	Shows the MindGenius Results page.
spell check map perform spell check	Performs a spell check of the map.
show mindgenius options window reveal mindgenius options window	Reveals the MindGenius Options window.
export as word export to word	Opens the Save As window, ready to be saved as a MS Word document.
select a boundary style add boundary remove boundary	Shows the available boundary styles (A branch must be selected).
toggle auto colour auto colour on auto colour off	Toggles the Auto Colour feature.

## Tasks and Sorting functions

Command(s) you can say	Description
apply branch start date	Makes ready for a Start date to be inserted for the selected branch.
apply branch due date	Makes ready for a Due date to be inserted for the selected branch.
apply branch end date	Makes ready for an End date to be inserted for the selected branch.
apply branch percentage	Makes ready for a percentage value to be applied for the selected branch.
apply branch status	Makes ready for a status option to be applied to the selected branch.
apply branch duration value	Makes ready for a duration value to be applied to the selected branch.
apply branch duration measurement apply branch duration unit	Makes ready for a duration unit to be selected for the selected branch.
apply branch priority	Makes ready for a priority option to be applied to the selected branch.
apply branch work value	Makes ready for a work value to be applied to the selected branch.
apply branch work measurement apply branch work unit	Makes ready for a work unit to be selected for the selected branch.
apply branch cost	Makes ready for a cost value to be applied to the selected branch.
apply branch quantity	Makes ready for a quantity value to be applied to the selected branch.
apply branch complete branch completed	Marks the selected branch/task as complete.
clear branch tasks	Clears all task data from the selected branches.
create resource map create resource centric map	Opens the Create Resource-Centric Map window.
turn on project mode change to gantt chart	Turns on the Project Mode to view the map as Gantt chart.
send tasks to outlook	Send selection to Outlook as tasks.
cancel that	To change your mind when you are about to apply a task.
next option	When a task is selected, use this phrase to navigate through the options.
previous option	When a task is selected, use this phrase to navigate through the options.

## Tasks and Sorting functions (cont'd)

Command(s) you can say	Description
sort by branch title	Sorts branches by their titles.
sort by branch due date	Sorts branches by their due date.
sort by branch start date	Sorts branches by their start date.
sort by branch end date	Sorts branches by their end date.
sort by branch duration	Sorts branches by their duration values.
sort by percent complete sort by percentage complete	Sorts branches by their percentage values.
sort by branch priority	Sorts branches by their priority.
sort by branch status	Sorts branches by their status.
sort by branch cost	Sorts branches by their cost values.
sort by branch quantity sort by branch quantity value	Sorts branches by their quantity values.
sort by branch work	Sorts branches by their work values.
sort by branch category	Sorts branches by their categories.
show sort options show sort options window	Reveals the Show Options window.

## Gantt Chart functions

Command(s) you can say	Description
create a gantt chart	Converts the existing map into a Gantt chart.
open task properties window show task properties window	Opens the Task Properties window.
apply task start date	Makes ready for a Start date to be inserted for the selected task.
apply task due date	Makes ready for a Due date to be inserted for the selected task.
apply task end date	Makes ready for an End date to be inserted for the selected task.
apply task percentage	Makes ready for a percentage value to be applied for the selected task.
apply task status	Makes ready for a status option to be applied to the selected task.
apply task duration value	Makes ready for a duration value to be applied to the selected task.
apply task duration measurement apply task duration unit	Makes ready for a duration unit to be selected for the selected task.
apply task priority	Makes ready for a priority option to be applied to the selected task.
apply task work value	Makes ready for a work value to be applied to the selected task.
apply task work measurement apply task work unit	Makes ready for a work unit to be selected for the selected task.
apply task cost	Makes ready for a cost value to be applied to the selected task.
apply task quantity	Makes ready for a quantity value to be applied to the selected task.
apply task complete	Marks the selected task as complete.

## Gantt Chart functions (cont'd)

Command(s) you can say	Description
show project options show file properties window	Opens the File Properties window.
new child task add new child task	Inserts a new child task.
new sibling task add new sibling task	Inserts a new sibling task.
select task above move to task above	Selects the task above the selected task.
select task below move to task below	Selects the task below the selected task.
select this task and the task above select this and the task above	Selects the selected task and the task above.
select this task and the task below select this and the task below	Selects the selected task and the task below.
indent task indent this task	Indents the selected task.
outdent task outdent this task	Outdents the selected task.
delete task delete this task	Deletes the selected task.
scroll to task	Scrolls the chart to bring the selected task into view.
link tasks link selected tasks	Links the selected tasks
link selected task to the task below link to task below	Links the selected task to the task below.
link selected task to the task above link to task above	Links the selected task to the task above.
unlink tasks unlink selected tasks	Unlinks the selected tasks.
toggle the critical path show the critical path hide the critical path	Toggles the critical path.
show timeline in quarters	Changes the visible timeline unit to quarters.
show timeline in months	Changes the visible timeline unit to months.
show timeline in weeks	Changes the visible timeline unit to weeks.
show timeline in days	Changes the visible timeline unit to days.
show timeline in hours	Changes the visible timeline unit to hours.
filter by tasks due date is overdue filter by due date is overdue	Shows tasks that fulfil the filter description.
filter by tasks due date is today filter by due date is today	Shows tasks that fulfil the filter description.
filter by tasks due date is this week filter by due date is this week	Shows tasks that fulfil the filter description.
filter by tasks end date is ending this week filter by end date is ending this week	Shows tasks that fulfil the filter description.
filter by tasks end date is today filter by end date is today	Shows tasks that fulfil the filter description.
filter by tasks end date is overdue filter by end date is overdue	Shows tasks that fulfil the filter description.

## Gantt Chart functions (cont'd)

Command(s) you can say	Description
filter by tasks end date is ended filter by end date is ended	Shows tasks that fulfil the filter description.
filter by tasks status is not started filter by status is not started	Shows tasks that fulfil the filter description.
filter by tasks status is in progress filter by status is in progress	Shows tasks that fulfil the filter description.
filter by tasks status is completed filter by status is completed	Shows tasks that fulfil the filter description.
filter by status is waiting on someone else	Shows tasks that fulfil the filter description.
filter by tasks status is deferred filter by status is deferred	Shows tasks that fulfil the filter description.
open the filter builder window open filter builder window	Reveals the Filter Builder window.
open quick filter window open quick filter	Reveals the Quick Filter window.
filter by summaries filter by task summaries	Shows tasks that fulfil the filter description.
filter by milestones filter by task milestones	Shows tasks that fulfil the filter description.
filter by tasks assigned to me	Shows tasks that fulfil the filter description.
filter by tasks not assigned to anyone	Shows tasks that fulfil the filter description.
toggle non matches hide non matches show non matches	Hides or shows the branches that do not pass the current filter.
clear filter	Clears the applied filter.

## Slides functions

Command(s) you can say	Description
switch to slide view switch to map view	Toggles between Map view and Slide view.
start slide show from first slide	Starts the slideshow from the first slide.
start slide show from this slide	Starts the slideshow from the selected slide.
next slide	Moves to the next slide in the slide show presentation.
previous slide	Moves to the previous slide in the slide show presentation.
close slide show exit slide show	Closes the slide show presentation.
add new slide add blank slide	Adds a blank slide.
insert slide text	Enables the user to add text to the selected slide.
insert slide picture	Enables the user to add a picture to the selected slide.
move slide up move this slide up	Moves the position of the selected slide up one position.
move slide down move this slide down	Moves the position of the selected slide down one position.
delete this slide delete slide	Deletes the selected slide.

## Slides functions (cont'd)

Command(s) you can say	Description
format slide background change slide background	Opens the Format Slide Background window.
edit slide transition open slide transition window	Opens the Edit Slide Transition window.
save slides	Saves the MindGenius document.
export slides as powerpoint file export as powerpoint export to powerpoint	Opens the Save As window, ready to be saved as a MS PowerPoint document.
export slides as pdf file export slides as pdf	Opens the Save As window, ready to be saved as a PDF document.

## Additional functions

Command(s) you can say	Description
locate the topic (x) find the topic (x) focus on the topic (x) select the topic (x)	Looks for and if found, applies focus to the Topic of the dictated topic title. For example, say "locate the topic conclusion".

## MindGenius Notes:

When performing dictation, the "Dictation Box" will appear and the use of commands such as "*click transfer*" and "*click cancel*" work in the normal way.

When dictating within MindGenius, we are of the opinion that performing dictation works best with the Dictation Box switched off.

# VoxAid commands cheat sheet for MindManager v19, 2020, 21, 22 & 23

## Notes:

It is useful to be aware of the default built-in Dragon menu, keyboard and mouse commands.

It is best practice to pause before and after dictating command phrases.

Where necessary, VoxAid commands can be trained to recognise your voice | Help is available from the support page on the VoxAid.co.uk website.

VoxAid command phrases include natural language variations to perform tasks.

## Frequently used

Command(s) you can say	Description
create new map create a new mind map	Creates a new mind map.
open existing map open an existing mind map	Opens the Open File window.
save this map	Saves the current mind map or opens the Save As window if the map is not been saved previously.
close this map close this mind map	Closes the current mind map.
add new topic new topic	Creates a new topic in the mind map.
add and edit topic edit new topic edit a new topic	Creates a new topic and places the cursor in the topic ready for dictation.
edit topic edit this topic	Makes the selected topic ready for dictation.
apply that press enter	Confirms the dictated phrase or word in a topic title.
edit next topic edit the next topic	Makes the topic after the selected topic ready for dictation.
edit previous topic edit the previous topic	Makes the topic before the selected topic ready for dictation.
delete topic delete this topic	Deletes the selected topic and all connected subtopics.
remove this topic remove this topic only	Deletes only the selected topic, any existing subtopics will remain as part of the map.
select all topics	Selects all topics and elements within the map.
add subtopic insert subtopic new subtopic	Adds a subtopic to the selected topic.
add topic before insert topic before add topic above	Creates a topic at the same level before the selected topic.
add parent topic insert parent topic	Creates a topic immediately before the selected topic, therefore the existing selected topic will become a subtopic of the new topic.
amend this topic <sup>2</sup> amend topic <sup>2</sup>	Places the cursor at the end of the selected topic text.
amend from the beginning <sup>2</sup> amend topic from beginning <sup>2</sup>	Places the cursor at the beginning of the selected topic text.

## Frequently used (cont'd)

Command(s) you can say	Description
add (x) topics create (x) topics	Adds (x) topics to the map (1...10). For example, say "add 3 topics".
add (x) subtopics create (x) subtopics	Adds (x) subtopics to a topic (1...10). For example, say "add 3 subtopics".
add note show notes	Creates a note or reveals an existing note for the selected topic.
hide notes hide note	Hides the note of the selected topic.
add callout add callout topic	Adds a callout topic to the selected topic.
add link add a link	Opens the Add Link window.
add attachment add an attachment	Opens the Attach Files window.
paste as callout paste as a callout	Pastes the contents of the Clipboard into a callout attached to the selected topic.
paste as topic paste as a topic	Pastes the contents of the Clipboard into a subtopic of the selected topic.

## Navigation functions

Command(s) you can say	Description
select central topic go to central topic	Selects the central topic.
select next topic select the next topic	Selects the next topic in the level of topics.
select previous topic select the previous topic	Selects the previous topic in the level of topics.
go to first topic Move to top sibling topic	Selects the first topic in the level of topics.
go to end topic Move to bottom sibling topic	Selects the last topic in the level of topics.
go to last topic	Selects the last created topic in the map.
select parent select parent topic	Selects the parent topic of the selected topic.
move left   right   up   down	Selects the topic to the left, right, up or down of the selected topic. For example, say "move left".
select all siblings above   below	Selects all the siblings above or below the selected topic. For example, say "select all siblings above".
select all siblings	Selects all siblings of the selected topic.
move forward   backward through selection history	Moves to the topic forward or backward through the topic selection history. For example, say "move back through history".
scroll up scroll down	Scrolls the map up or down.
scroll up (n) times scroll down (n) times	Scrolls the map up or down by an amount. For example, say "scroll up five times". The range is 1...10.
Nudge the map up   down   left   right <sup>2</sup>	Nudges the map left, right, up or down. For example, say "nudge the map left".

## View functions

Command(s) you can say	Description
balance map	Balances the Main Topics in the map by displaying an equal number of topics on either side of the Central Topic.
fit map	Resizes the map to fit the current window size.
show numbering	Applies numbering to the child topics of the selected parent topic.
remove numbering remove numbering from topics	Removes numbering from the child topics of the selected parent topic.
reset topic positions reset all topic positions	Resets all topic positions in the map.
focus topic	Applies focus to the selected topic.
focus on this topic only isolate topic	Displays only the selected topic and its subtopics.
show priority view show icon view	Shows the mind map in priority view.
show map view	Shows the mind map in map view.
show outline view	Shows the mind map in outline view.
show schedule view	Shows the mind map in schedule view.
print preview show print preview	Switches to the print preview view.
close print preview	Closes the print preview view.
collapse map	Display the map showing only level one topics.
collapse topic	Hides all the subtopics of the selected topic.
expand level expand topic	Expands the selected topic to reveal its subtopics.
show one level	Displays the map showing only level one topics.
show two levels	Displays the map showing topics that are level one and two.
show three levels	Displays the map showing topics that are level one, two and three.
show all levels	Displays the map showing topics of all levels.
move topic down	Moves the selected topic down one position place.
move topic up	Moves the selected topic up one position place.
move topic to home	Moves the selected topic to the last position in the level of topics.
move topic to end	Moves the selected topic to the first position in the level of topics.
zoom in	Zooms in to the map.
zoom out	Zooms out from the map.
increase font	Increases the font size of the selected topic title text.
decrease font	Decreases the font size of the selected topic title text.

## Other functions

Command(s) you can say	Description
make priority one make this priority one	Adds the priority 1 icon to the selected topic.
make priority two make this priority two	Adds the priority 2 icon to the selected topic.
make priority three make this priority three	Adds the priority 3 icon to the selected topic.
make priority four make this priority four	Adds the priority 4 icon to the selected topic.
make priority five make this priority five	Adds the priority 5 icon to the selected topic.
make priority six make this priority six	Adds the priority 6 icon to the selected topic.
make priority seven make this priority seven	Adds the priority 7 icon to the selected topic.
make priority eight make this priority eight	Adds the priority 8 icon to the selected topic.
make this priority nine	Adds the priority 9 icon to the selected topic.
remove icon remove all icons	Removes all icons from the selected topics.
strikethrough this topic	Applies a strikethrough to the active topic title.
remove strikethrough	Removes the strikethrough from the active topic title.
add boundary draw a boundary	Adds a boundary around the active topic and it's subtopics.
remove boundary remove this boundary	Removes the boundary from the selected parent topic that has a boundary.
add tag create tag	Reveals the New Tag window.
create a relationship insert a relationship	Creates a relationship that starts from the selected topic.
split topic at cursor and create new sibling	Split topic at cursor location to create new sibling.
split topic from cursor and create subtopic	Split topic at cursor location to create new subtopic.
split topic split into multiple topics	Splits the selected topic title (by spaces) into new topics.
split topic as multiple subtopics split into multiple subtopics	Splits the selected topic title (by spaces) into new subtopics.
apply fill colour add fill colour	Fills the topic with the last selected fill colour.
select fill colour select a fill colour	Reveals the fill colour palette.
clear formatting	Reverts the selected topic back to its original style settings.
show mind manager options window reveal mind manager options window	Reveals the MindManager Options window.
spell check map perform spell check	Performs a spell check of the map.
export as word export to word	Opens the Export Map As window, ready to be saved as a MS Word document.
export as powerpoint <sup>3</sup> export to powerpoint <sup>3</sup>	Opens the Export Map As window, ready to be saved as a MS PowerPoint document.
export as excel <sup>1</sup> export to excel <sup>1</sup>	Opens the Excel Export Settings window.

## Other functions (cont'd)

Command(s) you can say	Description
send to microsoft word send topic to microsoft word	
send to new linked map send topic to new linked map	
send to microsoft outlook as task send to outlook as task	
send to microsoft outlook as appointment send to outlook as appointment	
send to new spreadsheet send topic to new spreadsheet	Sends as a CSV file.
send to zapier send topic to zapier	
send to opml document send topic to opml document	
send to microsoft excel <sup>2</sup> send topic to microsoft excel <sup>2</sup>	
send to share point <sup>2</sup> send items to share point <sup>2</sup>	
create slide from topic create slides from topics	
publish this mind map <sup>1</sup> start new publish <sup>1</sup>	Opens the Publish window.
start co editing session <sup>1</sup>	Starts the co-editing functionality.

## Additional functions

Command(s) you can say	Description
show map word count word count this map show word count for map	Produces a pop-up window displaying a breakdown of the number of words in Topics, Callouts, Floating topics and Notes for the whole mind map. The total number of words is also displayed.
show topic word count word count this topic topic word count	Produces a pop-up window displaying the number of words in the topic and any notes attached to the topic.
locate the topic (x) find the topic (x) focus on the topic (x) select the topic (x)	Looks for and if found, applies focus to the Topic of the dictated topic title. For example, say "locate the topic conclusion".
convert this topic to a callout change to callout convert to callout	Converts the selected Topic into a Callout.
convert this callout to a topic change to topic convert to topic	Converts the selected Callout into a Topic.
create a topic alert <sup>1</sup> create a topic alarm <sup>1</sup> add a topic alert <sup>1</sup>	Opens the Add Topic Alert window, which allows you to set a reminder to open and work with a specific map.
add a standard image <sup>1</sup> add a standard image to this topic <sup>1</sup>	Opens the Add Image file browser window, ready for you to select an image to be added to the selected topic or map workspace.
add a thumbnail image <sup>1</sup> add a thumbnail image to this topic <sup>1</sup>	Opens the Add Image file browser window, ready for you to select a thumbnail image for the selected topic.

## Additional functions(cont'd)

Command(s) you can say	Description
search for an image of a (x) <sup>1</sup> find an image of a (x) <sup>1</sup>	Works when the Add Image window is active. It will search the MindManager library of images for the dictated image. For example, say "search for an image of a building". Use Dragon generic commands to navigate the available images ("press down arrow" / "press up arrow").
select image <sup>1</sup> select this image <sup>1</sup>	Works when the Add Image window is active. It will select the highlighted image and close the Add Image window.
read this back to me <sup>1</sup> read this out loud <sup>1</sup> read this topic <sup>1</sup>	Reads out loud the selected Topic or Callout.
add task information <sup>2</sup> show the task information <sup>2</sup>	Adds the task information to the selected topics.
split by periods split by full stops	Splits the selected topic title (by periods) into new topics.
split by commas split by semi-colons split by colons split by question marks	Splits the selected topic title by the dictated punctuation mark into new topics.
merge these topics	Merges the topic title of the selected topics into a new topic. Note, numbering must be switched on to maintain the order.
merge topics and create note	Merges the topic title of the selected topics into a note of a new topic. Note, numbering must be switched on to maintain the order.

### MindManager Notes:

Dragon generic, menu, keyboard and mouse commands are available for use in MindManager and at times should be used with these custom commands.

For example, the custom command *"create relationship"* can be used with the *"mouse grid"* command to place the relationship on the intended Topic. To complete the formation of the relationship, use the generic mouse command *"mouse click"*.

When performing dictation, the "Dictation Box" will appear and the use of commands such as *"click transfer"* and *"click cancel"* work in the normal way.

### Footnote:

<sup>1</sup> The command is only available for MindManager versions 2020 and above.

<sup>2</sup> The command is only available for MindManager version 2021 and above.

<sup>3</sup> The command is not available for MindManager version 2021 and above.

## VoxAid commands cheat sheet for MindView v7, v8 & v9

### Notes:

It is useful to be aware of the default built-in Dragon menu, keyboard and mouse commands.

It is best practice to pause before and after dictating command phrases.

Where necessary, VoxAid commands can be trained to recognise your voice | Help is available from the support page on the VoxAid.co.uk website.

VoxAid command phrases include natural language variations to perform tasks.

### Frequently used Mind Map functions

Command(s) you can say	Description
create a new mind map <sup>2</sup>	Creates a new Mind Map document.
create a new left right map <sup>2</sup>	Creates a new Left Right Map.
create a new top down map <sup>2</sup>	Creates a new Top Down Map.
create a new outline <sup>2</sup>	Creates a new Outline document.
create a new time line <sup>2</sup>	Creates a new Time Line document.
create a new gantt chart <sup>2</sup>	Creates a new Gantt chart.
create a new kanban board <sup>2</sup>	Creates a new Kanban Board document.
create a new year wheel <sup>2</sup>	Creates a new Year Wheel document.
create a branch add new topic	Creates a new branch in the mind map.
edit this branch edit this topic	Makes the selected branch ready for dictation.
add and edit branch edit a new branch edit a new topic	Creates a new branch and places the cursor in the branch ready for dictation.
add and edit sub-branch edit a new sub-branch edit a new subtopic	Creates a new sub-branch and places the cursor in the branch ready for dictation.
apply that press enter finish editing	Confirms the dictated phrase or word in a branch title.
delete this branch delete this topic	Deletes the selected branch and all connected sub-branches.
remove this branch only remove this topic only	Deletes only the selected topic, any existing subtopics will remain as part of the map.
select all branches select all topics select everything	Selects all branches within the map.

## Frequently used Mind Map functions (cont'd)

Command(s) you can say	Description
create sub-branch add subtopic new subtopic	Adds a sub-branch to the selected topic.
Add a pre-branch insert parent topic	Creates a branch immediately before the selected branch, therefore the existing selected branch will become a sub-branch of the new branch.
create (x) branches   sub branches add (x) topics   sub topics insert (x) topics   sub topics	Adds (x) branches/sub branches to the map (1...20). For example, say "add 3 branches".
paste clipboard as branch paste as a branch paste as a topic	Pastes the contents of the Clipboard as a sub-branch of the selected branch.
add branch note	Creates a new note for the selected branch.
edit branch note edit notes go to topic notes	Moves the focus from the selected branch and places the cursor into the Text Note Editor.
go to branch go to topic go back to branch	Moves the cursor from the Text Note Editor and places focus on the selected branch.
show notes show text note editor	Shows the Text Note Editor for the selected branch.
hide notes close notes close text note editor	Hides the text note editor for the selected branch.
add a comment insert a comment show comment	Opens the Comment window for the selected branch.
close comment window close comment	Closes the active Comment window.
add attachment to branch add attachment to topic	Opens the Finder window.
add hyperlink to branch add hyperlink to topic	Opens the Hyperlink window. Dictate "press tab" to navigate between the fields.
show word count show document statistics	Shows the Document Statistics window.
create a branch connection add a branch connection	Activates the Branch Connection option.

## View functions

Command(s) you can say	Description
switch to mind map view change to mind map	Displays the document in the Mind Map view.
switch to top down view change to top down	Displays the document in the Top Down view.
switch to left right view change to left right	Displays the document in the Left Right view.
switch to timeline view change to timeline	Displays the document in the Timeline view.
switch to outline view change to outline view	Displays the document in the Outline view.
switch to gantt view change to gantt view	Displays the document in the Gantt view.
switch to kanban view <sup>2</sup> change to kanban view <sup>2</sup>	Displays the document in the Kanban view.
switch to year wheel <sup>2</sup> change to year wheel <sup>2</sup>	Displays the document in the Year Wheel view.
toggle full screen mode switch to full screen full screen mode on full screen mode off	Toggle Full Screen Mode on and off.
fit map to window resize map	Resizes the map to fit the current window size.
apply branch focus branch focus	Applies focus to the selected branch and its sub-branches only.
clear branch focus remove branch focus	Removes focus from the selected branch to show the whole map.
collapse this branch hide sub branches collapse topic	Hides all the sub-branches of the selected branch.
expand this branch show sub branches expand topic	Expands the selected branch to reveal its sub-branches.

## Capture and Citation functions

Command(s) you can say	Description
capture text <sup>1</sup> capture image <sup>1</sup>	Starts up the Capture function.
insert citation <sup>1</sup> open citations window <sup>1</sup>	Opens the Insert Citation window.
manage citations <sup>1</sup>	Opens the Manage Citations window.
manage sources <sup>1</sup>	Opens the Sources window.
create a new source manually <sup>1</sup>	Opens the Edit Source window.
add source by isbn <sup>1</sup> find source by title <sup>1</sup> add source by author <sup>1</sup>	Opens the Add New Source window (Powered by WorldCat). Ready for you to dictate the ISBN, author or title.
import my zotero sources <sup>1</sup>	Opens the Select Sources to Import window.
import my mendeley sources <sup>1</sup>	Opens the Select Sources to Import window.

## Artificial Intelligence (AI) functions (MindView v9 only)

Command(s) you can say	Description
generate brainstorm* brainstorm topic*	Generates a brainstorm of ideas for the selected topic.
generate topic ideas* create topic ideas*	Generates a list of topic ideas for the selected topic.
generate questions* create questions for this topic*	Generates a list of related questions for the selected topic.
generate pros & cons* what are the pros & cons*	Generates a list of pros & cons for the selected topic.
write a definition* create a definition for this topic*	Generates a definition for the selected topic.
write a synopsis* create a synopsis for this topic*	Generates a synopsis for the selected topic.
write an abstract* create an abstract for this topic*	Generates an abstract for the selected topic.
fix the grammar in this topic*	Fixes grammatical errors in the selected topic.
fix the grammar in this text**	Fixes grammatical errors in the selected text.
rephrase this topic*	Generates a revised version of the selected topic.
rephrase this text**	Generates a revised version of the selected text.
simplify this topic*	Generates a simplified version of the selected topic.
simplify this text**	Generates a simplified version of the selected text.
expand this topic*	Generates an expanded version of the selected topic.
expand this text**	Generates an expanded version of the selected text.
Translate this topic to <language>* Translate topic to <language>*	Translates the topic text to a specific language. For example, you can say "translate this topic to French"
Translate this text to <language>** Translate text to <language>**	Translates the selected text in the Text Note Editor to a specific language. For example, you can say "translate text to Spanish"

\* Use this command on a selected topic (cursor is not within the Text Note Editor area).

\*\* Use this command on selected text within the Text Note Editor.

<Language>: British English, American English, French, German, Spanish, Italian, Portuguese, Arabic, Chinese, Danish, Norwegian, Swedish, Russian, Hindi

## Additional functionalities

Command(s) you can say	Description
read this back to me read this out loud read this	Reads out the selected branch label, comment, or text note.
Show read aloud options <sup>2</sup>	Open the Read Aloud options window.
Change voice to David <sup>2</sup> Switch to voice one <sup>2</sup>	Change the read aloud voice to David.
Change voice to Hazel <sup>2</sup> Switch to voice two <sup>2</sup>	Change the read aloud voice to Hazel.
Change voice to Zira <sup>2</sup> Switch to voice three <sup>2</sup>	Change the read aloud voice to Zira.

## Additional functionalities (cont'd)

Command(s) you can say	Description
create (x) branches add (x) topics insert (x) topics	Adds (x) branches to the map (1...20). For example, say "add 3 branches".
create (x) sub-branches add (x) subtopics insert (x) subtopics	Adds (x) sub-branches to a branch (1...20). For example, say "add 3 sub-branches".
find the word (x) find the phrase (x) search for the word (x) search for the phrase (x)	Looks for instances of the dictated word or phrase. For example, say "find the word conclusion".
split by spaces split by periods split by commas split by semi colons split by question marks	Splits the branch text by the delimiter dictated into new branches. For example, you can say "split branch by full stops".

### MindView Notes:

For best results MindView should be opened after the Dragon application is opened.

Dragon generic, menu, keyboard, and mouse commands are available for use in MindView and at times should be used with these custom commands.

For example, the custom command *"create branch connection"* can be used with the generic *"mouse grid"* and *"mouse click"* commands to place the connection between the source and connected branch.

Equally, when using the custom command *"edit branch"*, you will notice that the whole text is selected. Use the generic Dragon command *"Unselect that"* and then use generic commands to edit the required portions of the text.

When performing dictation, the "Dictation Box" may appear and the use of commands such as *"click transfer"* and *"click cancel"* work in the normal way.

### Footnote:

<sup>1</sup> The command is only available for MindView v8 & v9.

<sup>2</sup> The command is only available for MindView v9.

## VoxAid commands cheat sheet for Microsoft OneNote

### Notes:

It is useful to be aware of the default built-in Dragon commands to click a button or other items, show MouseGrid and the pressing of keyboard keys.

It is best practice to pause before and after dictating command phrases.

Where necessary, VoxAid commands can be trained to recognise your voice | Help is available from the support page on the VoxAid.co.uk website.

VoxAid command phrases include natural language variations to perform tasks.

### Manage Pages, Notebooks and Sections functions

Command(s) you can say	Description
open a notebook	Open a notebook
open a new onenote window open new onenote window	Open a new OneNote window
open a small onenote window create a side note	Open a small one note window to create a side note
open move option open copy option	Open move option for current section (opens the Move or Copy Section window)
create new section create section	Create new section
create new section group	Create new section group
create page below current page create a new page below	Create a new page below the current page tab on the same level
create a sub-page below current page create new sub-page below	Create a new sub-page below the current page
password protect this section add a password	Password protect the section
lock all sections	Lock all password protected sections
change paper size	Open the Paper size pane

### OneNote Window functions

Command(s) you can say	Description
toggle full page view enable full page view disable full page view	Enable or disable the full-page view
toggle ruler lines show ruler lines hide ruler lines	Show or hide Ruler lines on current page

## OneNote Window functions (cont'd)

Command(s) you can say	Description
increase width of page tab	Increase width of page tab
decrease width of page tab	Decrease width of page tab
increase width of section tab	Increase width of section tab
decrease width of section tab	Decrease width of section tab
toggle section tabs show section tabs hide section tabs	Show or hide section tab
zoom in	Zoom in
zoom out	Zoom out
toggle office ribbon show office ribbon hide office ribbon	Show or hide office ribbon
toggle full screen view enable full screen view disable full screen view	Enable or disable the full screen view
replicate onenote window replicate this window	Replicate OneNote window
dock One Note window undock One Note window	Dock/ undock OneNote program window to desktop

## Navigation functions

Command(s) you can say	Description
jump to title of page	Jump to the title of the page and select it
switch notebook change notebook	Switch to a different notebook on the Navigation bar; then dictate "press up arrow" or "press down arrow" to select a notebook. Dictate "press enter" to confirm
go to next page in section go to next page	Go to next page in section
go to previous page in section go to previous page	Go to previous page in section
go to next section	Go to next section
go to previous section	Go to previous section
go to first page in section go to first page	Go to first page in the section
go to last page in section go to last page	Go to last page in the section
move focus to notebook area	Move focus to Notebook area; continue by dictating "press up arrow" or "press down arrow" to select page. Dictate "Press Escape" to cancel
move focus to pages area	Move focus to Pages area; continue by dictating "press up arrow" or "press down arrow" to select page. Dictate "Press Escape" to cancel
move focus to section area	Move focus to Section area; continue by dictating "press up arrow" or "press down arrow" to select section. Dictate "Press Escape" to cancel

## Add Items functions

Command(s) you can say	Description
add hyperlink insert hyperlink	Insert hyperlink
insert current date insert todays date	Insert current Date
insert current time insert the time	Insert current Time
insert current date and time insert todays date and time	Insert current date and time
insert document on current page insert file on current page	Insert document or file on current page
insert document as a printout insert file as a printout	Insert document or file as a printout on current page
show document printouts hide document printouts	Show/Hide document printouts on current page (when running OneNote in high contrast mode)
insert picture from file insert image from file	Insert picture from file
insert picture from scanner insert picture from camera	Insert picture from scanner or a camera
insert screen clipping	Insert screen clipping. the OneNote icon must be active in the notification area on the windows taskbar

## Tag Notes functions

Command(s) you can say	Description
apply to do tag check to do tag clear to do tag	Apply, mark, or clear 'To-Do' tag
apply important tag clear important tag	Apply or clear the Important tag
apply question tag clear question tag	Apply or clear the 'Question' tag
apply remember for later tag clear remember for later tag	Apply or clear the 'Remember for later' tag
apply definition tag clear definition tag	Apply or clear the 'Definition' tag
apply highlight tag remove highlight tag	Apply or clear the 'Highlight' tag
apply contact tag clear contact tag	Apply or clear the 'Contact' tag
apply address tag clear address tag	Apply or clear the 'Address' tag
apply phone number tag clear phone number tag	Apply or clear the 'Phone number' tag
remove all note tags clear all note tags	Remove all note tags from the selected notes

## OneNote Tables functions

Command(s) you can say	Description
insert a table create a table	Open Insert Table window
create a column insert a column	Create another column in a table with a single row
create a row insert a row	Create another row when in the last cell in a table
create a column to the right insert a column on the right	Create column to the right of current column in table
create a column to the left insert a column on the left	Create column to the left of current column in table
create a row below insert a row below	Create row below current row in table
create a row above insert a row above	Create row above the current one in table (when the cursor is at the beginning of any row)
delete this row delete row	Delete current empty row in table (when the cursor is at the beginning of the row)
create another paragraph insert another paragraph	Create another paragraph in the same cell in a table
convert text to math equation convert to a math equation	Start a math equation or convert selected text to a math equation

## Outlines functions

Command(s) you can say	Description
show through level 1	show through level 1
expand to level 2 show to level 2	Expand to level 2
expand to level 3 show to level 3	Expand to level 3
expand to level 4 show to level 4	Expand to level 4
expand to level 5 show to level 5	Expand to level 5
expand to level 6 show to level 6	Expand to level 6
expand to level 7 show to level 7	Expand to level 7
expand to level 8 show to level 8	Expand to level 8
expand to level 9 show to level 9	Expand to level 9
expand all levels	Expand all levels
increase indent by one level increase indent	Increase the indent by one level
decrease indent by one level decrease indent	Decrease the indent by one level
expand collapsed outline expand outline	Expand a collapsed outline
collapse expanded outline collapse outline	Collapse an expanded outline

## Search functions

Command(s) you can say	Description
move to search box go to search field	Move insertion point to search box
press down arrow move down press up arrow move up	Navigate up and down the search results and preview next result
dismiss search	While searching all notebooks, go to selected result and dismiss search
change scope to find on this page	Change the search scope to; find on this page
change scope to this section	Change the search scope to; this section
change scope to this section group	Change the search scope to; this section group
change scope to this notebook	Change the search scope to; this notebook
change scope to all notebooks	Change the search scope to; all notebooks
open search results pane	Open the Search Results pane
search page for the word (x) search page for the phrase (x)	Search only current page. For example, say "search page for the phrase "William Shakespeare".
move to next result	While searching current page, move to next result
move to previous result	While searching current page, move to previous result
dismiss page search	Finish searching page

## Outlook 2016 functions

Command(s) you can say	Description
send page by email	Send selected pages in an Email
create a today outlook task	Create a Today Outlook task from selected note
create a tomorrow outlook task	Create a Tomorrow Outlook task
create a this week outlook task	Create a This Week Outlook task
create a next week outlook task	Create a Next Week Outlook task
create a no date outlook task	Create a No Date Outlook task
open selected outlook task	Open the selected Outlook task
mark outlook task as complete	Mark the selected Outlook task as complete
delete selected outlook task	Delete selected Outlook task
sync changes in shared notebook	Sync changes in current shared notebook
sync changes in all shared notebooks	Sync changes in all shared notebooks
mark current page as unread	Mark current page as unread

## Other functions

Command(s) you can say	Description
perform spell check check spelling	Check spelling
open research pane open thesaurus show synonyms	Open research pane and thesaurus for the currently selected word
start a new audio recording start a recording	Start new audio recording
play selected audio	Play selected audio recording
stop playback of selected audio stop playback	Stop playback of selected audio recording
rewind ten seconds	Rewind the current audio recording by 10 seconds
rewind five minutes	Rewind the current audio recording by 5 minutes
fast forward ten seconds	Fast-forward the current audio recording by 10 seconds
fast forward five minutes	Fast-forward the current audio recording by 5 minutes
start a new video recording start video recording	Start new video recording

## Styling and Formatting functions

Command(s) you can say	Description
insert line break	Insert a line break without starting a new paragraph
insert new paragraph	Insert a new paragraph
indent paragraph	Indent paragraph
outdent paragraph	Outdent paragraph
move the selected paragraphs up move paragraph up	Move the current paragraph or several selected paragraphs up
move the selected paragraphs down move paragraph down	Move the current paragraph or several selected paragraphs down
jump to title of page	Jump to the title of the page and select it
highlight selected text	Highlight the selected text
apply heading style one	Apply Heading 1 style to the current note
apply heading style two	Apply Heading 2 style to the current note
apply heading style three	Apply Heading 3 style to the current note
apply heading style four	Apply Heading 4 style to the current note
apply heading style five	Apply Heading 5 style to the current note
apply heading style six	Apply Heading 6 style to the current note

## Styling and Formatting functions (cont'd)

Command(s) you can say	Description
apply normal style	Apply Normal style to the current note
increase font size	Increase the font size of the selected text
decrease font size	Decrease the font size of the selected text
apply superscript remove superscript	Apply or remove superscript on the selected text
apply subscript remove subscript	Apply or remove subscript on the selected text
apply strikethrough remove strikethrough	Apply or remove strikethrough on the selected text
apply bullet points remove bullet points	Apply or remove bulleted list format on the selected text
apply numbering remove numbering	Apply or remove numbered list format on the selected text
apply normal format	Apply normal format on the selected text
change page colour	Change the page colour (dictate " <i>press up arrow, press down arrow, press left arrow, press right arrow</i> " to navigate the available colours, dictate " <i>press enter</i> " to select your choice)
remove page colour	Remove and set page colour to none
change section colour to <colour> <sup>1</sup>	Change the current section colour. For example, say "change section colour to purple".
remove section colour	Remove and set section colour to none

## MS OneNote Notes:

Dragon generic, menu, keyboard and mouse commands are available for use and should be used with these custom commands.

When performing dictation, the "Dictation Box" may at times appear and the use of commands such as "click transfer" and "click cancel" work in the normal way. The Dictation box can be turned off for the current application.

# VoxAid commands cheat sheet for Sonocent Audio Notetaker 5

## Notes:

It is useful to be aware of the default built-in Dragon commands to click a button or other items, show MouseGrid and the pressing of keyboard keys.

It is best practice to pause before and after dictating command phrases.

Where necessary, VoxAid commands can be trained to recognise your voice | Help is available from the support page on the VoxAid.co.uk website.

VoxAid command phrases include natural language variations to perform tasks.

## Navigation and File functions

Command(s) you can say	Description
move focus left	Moves focus to the pane to the left.
move focus right	Moves focus to the pane to the right.
go forward (x) chunk(s) move forward (x) chunk(s)	Moves the cursor when the Audio pane is in focus, forward by the dictated number of chunks. For example, say "move forward 5 chunks" (The range is 1-10 ).
go back (x) chunk(s) move back (x) chunk(s) move backwards (x) chunk(s)	Moves the cursor when the Audio pane is in focus, backwards by the dictated number of chunks. For example, say "move backwards 5 chunks" (The range is 1-10 ).
move to section above go to section above	Moves the cursor to the section above its current position.
move to section below go to section below	Moves the cursor to the section below its current position.
go to end of section move to end of section	Moves the cursor when the Audio pane is in focus to the end of the section.
go to beginning of section move to beginning of section go to start of section	Moves the cursor when the Audio pane is in focus to the start of the section.
new project new blank project create a new project	Opens a new Sonocent Notetaker project.
save project save this file	Saves the current project.
close project close this file	Closes the current project.
edit tags edit project details	Reveals the Tags window.

## Audio Chunk functions

Command(s) you can say	Description
select this chunk select next chunk	Selects the next chunk.
select the next (x) chunks	Selects the dictated number of next audio chunks. For example, say "select the next 5 chunks" (The range is 1-10 ).
select the previous chunk select previous chunk	Selects the previous chunk.
select the previous (x) chunks	Selects the dictated number of previous audio chunks. For example, say "select the previous 5 chunks" (The range is 1-10 ).
unselect this chunk unselect these chunks	Unselects the selected chunk(s).
merge chunks merge these chunks	Merges the selected chunks.
split chunk split this chunk	Splits the selected chunk.
change to chunk colour (x) chunk colour (x)	Changes the colour of the selected audio chunk(s). For example, say "chunk colour 4" (The range is 1-5 ).
select chunk colour change audio colour Select audio text Colour	Select audio chunk colour.
default chunk colour change to default chunk colour	Changes the colour of the selected audio chunk(s) to the default colour as determined by the settings.

## Section functions

Command(s) you can say	Description
insert section break create section break	Inserts a section break.
remove section break	Removes a section break.
insert section above create section break above	Inserts a section break above the current cursor position.
insert section below create section break below	Inserts a section break below the current cursor position.
select section select this section	Selects the section.
change to section colour (x) section colour (x)	Changes the colour of the active section. For example, say "section colour 8" (The range is 6-9).
section colours select section colour change section colour	Select section colour.

## Import / Export functions

Command(s) you can say	Description
import audio files import audio	Opens the Import Audio File Explorer window.
import an image import image	Opens the Import Images File Explorer window.
import slides or pdfs import slides import pdf import powerpoint slides	Opens the Import Slides or PDF File Explorer window.
import transcription	Opens the Import Transcription File Explorer window.
export audio as album create audio album	Opens the Browse for Folder window.
export selected audio export audio	Opens the Save Selected Audio As File Explorer window. An audio chunk(s) must be selected.
export text and images export images and text	Opens the File Explorer window ready for saving.
export text pane export text export text only	Opens the File Explorer window ready for saving.
export images pane export images export images only	Opens the File Explorer window ready for saving.
export reference pane export reference export reference only	Opens the File Explorer window ready for saving.
export text pane with time code	Opens the File Explorer window ready for saving.
export images pane with time code	Opens the File Explorer window ready for saving.
export reference pane with time code	Opens the File Explorer window ready for saving.
export text and images with time code export images and text with time code	Opens the File Explorer window ready for saving.
export as video create video	Opens the Video Export Options window.
export as small video	Opens the Export Video File Explorer window ready for saving.
export as medium video	Opens the Export Video File Explorer window ready for saving.
export as large video	Opens the Export Video File Explorer window ready for saving.

## Audio functions

Audio functions work best when the audio is set to come through your headphones.

Command(s) you can say	Description
press pause press pause button	Pause playback of audio.
press play press play button	Play audio.
press record press record button start recording	Starts the recording process.
press stop stop recording press stop button	Stops playback or recording.
skip backwards skip backward	Moves the cursor backwards by one audio chunk.
skip forwards skip forward	Moves the cursor forwards by one audio chunk.
slow down	Slow down the rate of playback.
speed up	Speed up the rate of playback.
increase volume make louder	Increase playback volume.
decrease volume make quieter	Decrease playback volume.
pause mode on turn on pause mode	Turns on Pause Mode.
pause mode off turn off pause mode	Turns off Pause Mode.
add noise cancellation to audio add noise cancellation	Apply noise cancellation setting.
remove noise cancellation	Remove noise cancellation setting.
add click reduction to audio add click reduction	Apply click reduction setting.
remove click reduction	Remove click reduction setting.
add low frequency cut to audio add low frequency cut	Apply low frequency cut setting.
remove low frequency cut	Remove low frequency cut setting.
add high frequency cut to audio add high frequency cut	Apply high frequency setting.
remove high frequency cut	Remove high frequency setting.
make audio thinner	Apply audio thinner setting.
remove audio thinner	Remove audio thinner setting.

## Audio functions (cont'd)

Audio functions work best when the audio is set to come through your headphones.

Command(s) you can say	Description
make audio brighter	Apply audio brighter setting.
remove audio brighter	Remove audio brighter setting.
play back in mono play audio in mono	Apply Audio Clean-Up setting.
play back in stereo	Apply Audio Clean-Up setting.
change voice shift to normal	Apply Audio Voice Shift setting.
change voice shift to deeper	Apply Audio Voice Shift setting.
change voice shift to deepest	Apply Audio Voice Shift setting.
change voice shift to higher	Apply Audio Voice Shift setting.
change voice shift to highest	Apply Audio Voice Shift setting.
show voice shift settings	Show Voice Shift settings.
show clean up settings show audio clean up settings	Show Clean-Up settings.
